---

SUMMARY

Computer Science undergraduate with a vocational background in Network Engineering (TKJ). Experienced in hands-on network deployment, including fiber optic splicing, LAN cabling, and server maintenance during an internship at PTIK Universitas Pancasila. Skilled in configuring MikroTik via Winbox, network routing, and running simulations in Cisco Packet Tracer. Eager to contribute practical hardware and networking skills to an entry-level network engineering role.

EDUCATION

Universitas Pancasila	Jakarta Selatan, Indonesia
Bachelor of Computer Science (Informatics Engineering)	*Expected Graduation: 2028*

Relevant Coursework: Computer Networks, Network Security, Operating Systems, Database Management Systems, Object-Oriented Programming, Data Structures & Algorithms.

SMK Teknindo Jaya	Depok, Indonesia
Vocational High School Diploma in Computer and Network Engineering (TKJ)	*Graduated: 2024*

EXPERIENCE

PTIK - Universitas Pancasila	Jakarta Selatan, Indonesia
Field Network & IT Support Intern	*December 2022 – March 2023*

- Executed outdoor and indoor physical deployment of fiber optic lines, including aerial routing across building infrastructures while adhering to safety standards.
- Conducted optical core splicing using fusion splicers and verified line connectivity using Visual Fault Locators (VFL) and Optical Power Meters (OPM).
- Fabricated and crimped custom UTP Ethernet cables (straight-through and crossover pinouts) with RJ45 connectors for LAN installations and hardware patching.
- Performed physical routine maintenance on server units, rack hardware, and networking enclosures, ensuring clean air circulation and dust-free environments.
- Handled OS deployment and desktop support, successfully installing and configuring Windows operating systems, driver suites, and Microsoft Office productivity tools.

ACADEMIC & HANDS-ON PROJECTS

Laboratory Network Setup & MikroTik Configuration	Hardware Laboratory
Network Engineer (Academic Practical Work)	*2023 – Present*

- Interconnected physical endpoints across personal computers, MikroTik RouterBoards, and distribution switches using appropriate straight-through and crossover cabling.
- Configured router settings via Winbox and web-based graphical management interfaces (WebFig), administering basic IP addressing, DHCP server setup, and gateway routing.
- Conducted local network testing on Windows client machines, configuring network adapters via Windows Control Panel, adjusting static IP/DNS settings, and verifying connectivity via CLI diagnostics (ping/traceroute).

Campus & Enterprise Network Simulation	Cisco Packet Tracer
Network Designer & Simulator	*2023 - 2026*

- Designed hierarchical multi-department network simulations featuring routers, manageable switches, and segregated VLAN architectures.
- Implemented Inter-VLAN routing, dynamic DHCP IP assignment, and Access Control Lists (ACLs) to establish subnet isolation and secure resource access.

TECHNICAL SKILLS

- **Networking Hardware & Cabling:** Fiber Optic Installation & Aerial Routing, Fusion Splicing, UTP Cabling (Straight-through & Crossover), RJ45 Crimping, Server Rack Maintenance.
- **Network Devices & Tools:** MikroTik RouterBOARD, Winbox, WebFig Router Interface, Cisco Packet Tracer, Optical Power Meter (OPM), Visual Fault Locator (VFL).
- **Network Protocols & Concepts:** TCP/IP, IPv4 Addressing & Subnetting, DHCP, DNS, VLAN, Static Routing, Default Gateway, Ping / Traceroute Diagnostics.
- **Systems & Software:** Windows OS Installation & Configuration, Windows Control Panel Network Adapter Management, Microsoft Office Suite, Linux (Ubuntu/Kali basics), Git/GitHub.
